

Python Foundations for Artificial Intelligence

B01 - Exact 100-page production blueprint

Audience: Absolute beginners through early intermediate learners

Page architecture

Pages	Section
1-4	Front matter: title, roadmap, prerequisites, and diagnostic
5-12	Chapter 1: How Programs Think
13-20	Chapter 2: Variables Types and Expressions
21-29	Chapter 3: Control Flow
30-38	Chapter 4: Functions and Decomposition
39-47	Chapter 5: Collections and Data Modeling
48-56	Chapter 6: Files Errors and Modules
57-65	Chapter 7: Object-Oriented Design
66-74	Chapter 8: Testing Debugging and Complexity
75-83	Chapter 9: NumPy and Vectorized Thinking
84-92	Chapter 10: Building a Small AI-Ready Data Tool
93-97	Capstone, review, and cumulative assessment
98-100	Glossary, answer guidance, index, and next steps

Chapter requirements

Chapter 1: How Programs Think

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 2: Variables Types and Expressions

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 3: Control Flow

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 4: Functions and Decomposition

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 5: Collections and Data Modeling

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter requirements - continued

Chapter 6: Files Errors and Modules

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 7: Object-Oriented Design

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 8: Testing Debugging and Complexity

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 9: NumPy and Vectorized Thinking

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 10: Building a Small AI-Ready Data Tool

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Capstone

Create a tested Python data-analysis utility with a command-line interface and clear documentation.

Production and QA

Author original English content. Verify code, formulas, solutions, citations, diagrams, accessibility, and objective alignment. Render and reflow until the final book contains exactly 100 content pages without blank pages, repeated filler, oversized headings, or artificial spacing. Deliver source Markdown, plain text, PDF, answer guidance, and a QA report.
