

Deep Learning, Generative AI, and Responsible Deployment

B05 - Exact 100-page production blueprint

Audience: Intermediate learners ready to train neural models

Page architecture

Pages	Section
1-4	Front matter: title, roadmap, prerequisites, and diagnostic
5-12	Chapter 1: Neural Networks and Representation Learning
13-20	Chapter 2: Backpropagation and Optimization
21-29	Chapter 3: Training Stability and Generalization
30-38	Chapter 4: Convolutional Networks and Vision
39-47	Chapter 5: Sequences Attention and Transformers
48-56	Chapter 6: Language Models and Embeddings
57-65	Chapter 7: Generative Models and Retrieval
66-74	Chapter 8: Evaluation Safety and Responsible AI
75-83	Chapter 9: Serving Monitoring and Cost
84-92	Chapter 10: Capstone: A Documented AI Product
93-97	Capstone, review, and cumulative assessment
98-100	Glossary, answer guidance, index, and next steps

Chapter requirements

Chapter 1: Neural Networks and Representation Learning

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 2: Backpropagation and Optimization

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 3: Training Stability and Generalization

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 4: Convolutional Networks and Vision

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 5: Sequences Attention and Transformers

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter requirements - continued

Chapter 6: Language Models and Embeddings

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 7: Generative Models and Retrieval

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 8: Evaluation Safety and Responsible AI

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 9: Serving Monitoring and Cost

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Chapter 10: Capstone: A Documented AI Product

Open with measurable objectives and prerequisites. Build intuition before formalism. Include at least two worked examples, an accessible visual or table, progressive practice, common mistakes, independent exercises, and retrieval review. Connect to executable Python or an interactive lab where appropriate.

Capstone

Deliver a small neural or retrieval-based AI product with evaluation, monitoring, limitations, and a model card.

Production and QA

Author original English content. Verify code, formulas, solutions, citations, diagrams, accessibility, and objective alignment. Render and reflow until the final book contains exactly 100 content pages without blank pages, repeated filler, oversized headings, or artificial spacing. Deliver source Markdown, plain text, PDF, answer guidance, and a QA report.
